

Question 1: What is a DataSource?

A dataSource is the origin or location from which data is collected, extracted, or obtained for use in analysis, reporting, or decision-making. It can be a database, sensor, file, API, website, or any other system that provides data.

Question 2: You have created a DataSource for sales data. What do you think is the destination of this data in terms of the Snowflake Schema? Why?

In a Snowflake Schema, the destination of sales data is the **Fact Table** because it stores the measurable metrics, such as sales amount and quantity sold, which represent the core business transactions.

The Fact Table acts as the central hub, connecting to various dimension tables like product, customer, and time, which provide context for the sales data. This structure enables multidimensional analysis, such as analyzing sales by product, region, or time, making the Fact Table the ideal destination for sales data in a Snowflake Schema.

Question 3: Go to the Data Preview and toggle the *Show data in internal format only flag*. Comment on the Revenue formats when you toggle.

The **Revenue** format changes from a human-readable, formatted version in the external view to a raw, standardized numerical format in the internal view, ensuring consistency and precision for data processing.

- Toggling between external and internal formats helps users understand how data is stored and processed internally versus how it is presented for reporting or visualization.
- The internal format is essential for ensuring data integrity and accuracy in analytical workflows, while the external format is more user-friendly for interpretation and decision-making.

Question 6: What are the differences between US data as compared to the data from Germany?

1. Currency:

- **US Data:** The currency is denoted as **USD** (United States Dollar).
- **Germany Data:** The currency is denoted as **EUR** (Euro).

2. Number Formatting:

- **US Data:** Numbers are formatted with a period (.) as the decimal separator and commas (,) as thousand separators.
- **Germany Data:** Numbers are formatted with a comma (,) as the decimal separator and periods (.) as thousand separators .

Question 7: Why did you have to create two DataSources, one for DE and one for US?

Creating two DataSources—one for **DE** and one for **US**—ensures **accuracy**, **consistency**, and **compliance** when handling region-specific data. It avoids issues related to currency, number formatting, date interpretation, language, regulatory requirements, units of measurement, and market-specific trends. This separation is critical for maintaining data integrity and generating reliable insights for each region.

Question 8: What is the Unit of Measure of Sales Quantity?

The **Unit of Measure** for **Sales Quantity** in the provided data is **ST**, which typically stands for **Stone** . This is a common unit of measure in sales and inventory systems, representing a single unit of a product. In the data, the **Sales Quantity** column lists numerical values followed by the unit **ST**, indicating that the sales quantities are measured in standard units of the product.

ORDERNUMBER	ORDERITEM	CUSTOMER	PRODUCT	SALESQUANTITY	UNITOFMEASURE	REVENUE	CURRENCY	DISCOUNT	COSTSUSD	SALESDATE

Question 9: Are any Characteristics mapped to the DataSource fields yet? Why? Why not?

It does not appear that **Characteristics** have been mapped to the **DataSource fields** yet. This is likely because the data is still in its raw form, having just been imported or extracted from a source system. At this stage, the focus is on loading the data, and mapping Characteristics may not have been performed. Additionally, the data might need to be cleaned, validated, or transformed before any mappings are applied. Mapping Characteristics often requires input from business users or stakeholders to define how fields should be interpreted or categorized, and this step might still be in progress. The data could also be in a testing phase, where the focus is on verifying the accuracy of the raw data before proceeding with more advanced configurations like mapping Characteristics.

Question 10: How many sales transactions do you have for the US? How many for DE?

For the US 84194 and for the DE 86816 sales transactions we have.
